INSTRUCTIONS FOR TYPESETTING CAMERA-READY MANUSCRIPTS USING $\text{\LaTeX}^*$

FIRST AUTHOR[†]

University Department, University Name, Address
City, State ZIP/Zone, Country[‡]
first_author@university.edu

SECOND AUTHOR

Group, Laboratory, Address
City, State ZIP/Zone, Country
second_author@group.com

Received (received date)

Revised (revised date)

The abstract should summarize the context, content and conclusions of the paper in less than 200 words. It should not contain any references or displayed equations. Typeset the abstract in 8 pt Times Roman with baselineskip of 10 pt, making an indentation of 1.5 pica on the left and right margins. Typeset similarly for keywords below.

Keywords: List four to six; should characterize article.

1. General Appearance

Contributions to the *International Journal of Uncertainty, Fuzziness and Knowledge-Based Systems (IJUFKS)* will be reproduced by photographing the author's submitted typeset manuscript. It is, therefore, essential that the manuscript be in its final form, and if an original computer printout because it will be printed directly without any editing. The manuscript should also be clean and unfolded. The copy should be evenly printed on a high resolution printer (600 dots/inch or higher). If typographical errors cannot be avoided, use cut and paste methods to correct them. Smudged copy, pencil or ink text corrections will not be accepted. Do not use cellophane or transparent tape on the surface as this interferes with

*Typeset title in 10 pt Times Roman uppercase and boldface. Please write down in pencil a short title to be used as the running head.

[†]Typeset names in 8 pt Times Roman, uppercase and lightface. Use footnotes only to indicate if permanent and present addresses are different. Funding information should go in the Acknowledgements section.

[‡]State completely without abbreviations, the affiliation and mailing address, including country. Typeset in 8 pt Times italic.

2 *Authors' Names*

the picture taken by the publisher's camera. Blank (redundant) spaces should be minimized by careful arrangement of tables and figures.

2. The Main Text

Contributions are to be in English. Authors are encouraged to have their contribution checked for grammar. American spelling should be used. Abbreviations are allowed but should be spelt out in full when first used. Integers ten and below are to be spelt out. Italicize foreign language phrases (e.g. Latin, French).

The text is to be typeset in 10 pt Times Roman, single spaced with baselineskip of 13 pt. Text area (excluding running title) is 5 inches (30 picas) wide and 7.8 inches (47 picas) high. Final pagination and insertion of running titles will be done by the publisher. Number each page of the manuscript lightly at the bottom with a blue pencil.

3. Major Headings

Major headings should be typeset in boldface with the first letter of important words capitalized.

3.1. *Sub-headings*

Sub-headings should be typeset in boldface italic with only first letter of the first word in uppercase.

3.1.1. *Sub-subheadings*

Sub-subheadings should be typeset in italics with only first letter of the first word in uppercase.

3.2. *Numbering*

Sections, sub-sections and sub-subsections are numbered in Arabic numerals (in boldface for sections and sub-sections).

3.3. *Lists of items*

Lists may be laid out with each item marked by a dot:

- item one,
- item two.

Items may also be numbered in lowercase roman numerals:

- (i) item one
- (ii) item two
 - (a) Lists within lists can be numbered with lowercase roman letters,
 - (b) second item.

4. Equations

Displayed equations should be numbered consecutively in the paper, with the number set flush right and enclosed in parentheses.

$$\mu(n, t) = \frac{\sum_{i=1}^{\infty} 1(d_i < t, N(d_i) = n)}{\int_{\sigma=0}^t 1(N(\sigma) = n) d\sigma}. \quad (1)$$

Equations should be referred to in abbreviated form, e.g. “Eq. (1)” or “(1)”. In multiple-line equations, the number should be given on the last line.

Displayed equations are to be centered on the page width. Standard English letters like x are to appear as x (italicized) in the text if they are used as mathematical symbols. Punctuation marks are used at the end of equations as if they appeared directly in the text.

Theorem 1. *Theorems, lemmas, etc. are to be numbered consecutively in the paper. Use double spacing before and after theorems, lemmas, etc.*

Thus the forcing $P_{\mathfrak{y}}$ can be understood as increasing the invariant $\mathfrak{y}$ in the gentlest way. Theorem 1 and Definition 1 says that $\mathfrak{c}$ can be isolated.

Theorem 2. *Suppose that there is a proper class of measurable cardinals. A curious twist of events occurs in the case of the tower number $\mathfrak{t}$.*

Definition 1. A cardinal invariant $\mathfrak{y}$ can be *isolated* if there is a forcing $P_{\mathfrak{y}}$ such that for every tame invariant $\mathfrak{x}$, if $\mathfrak{x} < \mathfrak{y}$ holds in some set forcing extension then it holds in the $P_{\mathfrak{y}}$ extension.

Corollary 1. *The fraction of a vector x is finite if and only if x belongs to the trajectory.*

Corollary 2. *The theory of cardinal invariants of the continuum is a large subfield of set theory*

Lemma 1. *Let $\Omega \subset T$ be a mes-measurable set. Then the set $\bar{A}(\Omega)$ is mes-measurable on T and $\text{mes } \Omega = \text{mes } \bar{A}(\Omega)$.*

We formulate the Birkhoff ergodic theorem relating to the transformation $\bar{A}$, Lemma 1 acting on the torus T .

Remark 1. From the definitions of torus T and measure mes on T it follows that σ -algebra of mes-measurable sets is generated by all cylinders $C_{k_1, \dots, k_s}$, and for any cylinder $C_{k_1, \dots, k_s}$ the equality $\text{mes } C_{k_1, \dots, k_s} = \mu_{k_1, \dots, k_s}(c_{k_1, \dots, k_s})$ holds.

Moreover, the assertion of Remark 1 is valid for any collection of intervals X_{p_n} but concrete lengths r_{p_n} of these intervals.

Proposition 1. *The (A, p, ω) -continued fraction of a vector x is finite if and only if $\{\{x\}\}$ belongs to the trajectory $\hat{A}^k \omega$ ($k = 0, 1, \dots$), where $\hat{A}$ is the map introduced in Definition 7 of Sec. 1 ($\hat{A}^0$ is the identity map of T).*

4 Authors' Names

Let $a_\nu/b_\nu = t_{k_\nu}/p_{k_\nu}$ be the fraction in which the numerator a_ν and the denominator b_ν are pairwise relatively simple numbers.

Proof. Proofs should end with □

Then, since the numbers γ_n and p_n are relatively simple and the numbers p_{k_s} are pairwise relatively simple.

5. Illustrations and Photographs

Figures are to be inserted in the text nearest their first reference. Original India ink drawings of glossy prints are preferred. Please send one set of originals with copies. If the author requires the publisher to reduce the figures, ensure that the figures (including letterings and numbers) are large enough to be clearly seen after reduction. If photographs are to be used, only black and white ones are acceptable.

Fig. 1. A schematic illustration of dissociative recombination. The direct mechanism, $4m_\pi^2$ is initiated when the molecular ion S_L captures an electron with kinetic energy.

Figures are to be sequentially numbered in Arabic numerals. Centralize the caption and place it below the figure. Typeset in 8 pt Times Roman with baselineskip of 10 pt. Use double spacing between a caption and the text that follows immediately.

Previously published material must be accompanied by written permission from the author and publisher.

6. Tables

Tables should be inserted in the text as close to the point of reference as possible. Some space should be left above and below the table.

Tables should be numbered sequentially in the text in Arabic numerals. Captions are to be centralized above the tables. Typeset tables and captions in 8 pt Times Roman with baselineskip of 10 pt.

Table 1. Comparison of acoustic for frequencies for piston-cylinder problem.

Piston mass	Analytical frequency (Rad/s)	TRIA6- S_1 model (Rad/s)	% Error
1.0	281.0	280.81	0.07
0.1	876.0	875.74	0.03
0.01	2441.0	2441.0	0.0
0.001	4130.0	4129.3	0.16

If tables need to extend over to a second page, the continuation of the table should be preceded by a caption, e.g. “(Table 2. *Continued*).”

7. Footnotes

Footnotes should be numbered sequentially in superscript Arabic numerals.¹

Acknowledgements

This section should come before the Appendix if any and should be unnumbered. Funding information may also be included here.

Appendix A. Appendices

Appendices should be used only when absolutely necessary. They should come after the References. If there is more than one appendix, number them alphabetically. Number displayed equations occurring in the Appendix in this way, e.g. (A.1), (A.2), etc.

$$\mu(n, t) = \frac{\sum_{i=1}^{\infty} 1(d_i < t, N(d_i) = n)}{\int_{\sigma=0}^t 1(N(\sigma) = n) d\sigma}. \quad (\text{A.1})$$

References

References are to be listed in the order cited in the text. Use the style shown in the following examples. They are to be cited in the text after punctuation marks, using superscripts without brackets. For journal names, use the standard abbreviations. Typeset references in 9 pt Times Roman.
